

Version History

1.00	Original version
1.01	Added: ! added to URL!
	Added: "vatNumber" parameter and explanation of VAT charges.
	Added: Clarification of address/postcode/country usage.
	Added: Error handling for Response.

1. Request

Required variables are in **bold**.

Optional variables are in *italics*.

This call should be made from a customer's web browser.

Variable Name (case insensitive)	Type	Max. Length	Allowed Values
orderNumber	integer		Order number returned from a previous call to AutoApplySSL.
<i>vatNumber</i>	string	12 chars	If the order is for an EU company, Comodo will charge UK VAT unless a VAT Number is specified here.
<i>email</i>	string	80 chars	Used to pre-populate the email address field in the WorldPay screen. The eventual email address used in the WorldPay screen (which may be amended by the user in that screen) will receive the invoice from us.
<i>name</i>	string	40 chars	Prepopulates WorldPay screen.
<i>address</i>	string	255 chars	Prepopulates WorldPay screen. Encode newlines as <CR> or <CR><LF>.
<i>postcode</i>	string	12 chars	Prepopulates WorldPay screen. Zip or Postal code
<i>country</i>	string	2 char	Prepopulates WorldPay screen. 2 character ISO-3166 code (upper case)
<i>tel</i>	string	30 chars	Prepopulates WorldPay screen. Phone Number
<i>fax</i>	string	30 chars	Prepopulates WorldPay screen. Fax Number

If the "address" parameter is completely omitted, the address details from the AutoApplySSL call will be used instead. To force an empty address, be sure to include the "address" parameter without a value.

If the "postcode" parameter is completely omitted, the "postalCode" from the AutoApplySSL call will be used instead. To force an empty postcode, be sure to include the "postcode" parameter without a value.

If the "country" parameter is completely omitted, the "countryCode" from the AutoApplySSL call will be used instead. To force an empty country, be sure to include the "country" parameter without a value.

Comodo will work out from the "country" (or "countryCode") and "vatNumber" parameters whether or not to charge the customer UK VAT.

2. Response

2.1 If Successful

The customer's web browser will be redirected to WorldPay, where they will be instructed to enter their payment details.

WorldPay will immediately inform Comodo when the customer has either paid successfully or declined to pay.

If the customer takes longer than 90 minutes to submit their payment details, their order will be "timed out" by Comodo – any attempt to complete payment will result in an error!

2.1 If an error occurred

Line	Possible Value(s)
<i>Mime-Type</i>	text/plain
Line 1: The text "Error: xxx" (xxx is one of: -1, -2, etc - see Possible Value(s))	-1 = Request was not made over https! -2 = Unrecognised argument! -3 = An argument is missing! -4 = An argument has an invalid value! -7 = 'country' is not a valid ISO-3166 country! -14 = An unknown error occurred! -17 = Request used GET rather than POST!

NOTE: if an order has already been paid for, the response will be "Error: -4".
