

# Roquette speeds up Certificate Management with Sectigo CLM

Roquette, a global leader in plant-based ingredients and pharmaceutical excipients, has been consistently focused on maintaining the highest security standards for its digital infrastructure.

Their areas of expertise range from BioPharma and Pharma & Nutraceuticals, to Cosmetics and Nutrition with a focus also in Animal Nutrition. Managing large volumes of digital certificates manually through Excel spreadsheets became increasingly inefficient and risky, prompting the company to seek an automated solution.

## Challenges

Before adopting Sectigo's Certificate Lifecycle Management (CLM) solution, Roquette's team were manually tracking certificate expiration dates using Excel. This process was prone to human error, time-consuming, and labor-intensive. A key staff member who manages integrations explained, "We used Excel files to track the expiration of numerous certificates. It was a challenge to ensure we didn't miss any renewal deadlines, and we were concerned about the security risks associated with such manual handling."

Additionally, Roquette's existing Public Key Infrastructure (PKI) was nearing end-of-life support, which compounded their urgency to find a more reliable and automated solution. Their roadmap for digital infrastructure upgrades included addressing this growing concern before any major security lapses occurred.

## Benefits of adopting Sectigo's CLM solution

Since adopting Sectigo's CLM solution, Roquette has experienced significant time savings and improved security in certificate management. The automation capabilities have greatly reduced manual tasks, allowing IT staff to focus on more strategic activities by minimizing the need for human intervention in managing certificates. This shift has been a game-changer for Roquette, enabling them to operate more efficiently.

In addition, Roquette has eliminated the risks of missed renewals and the inefficiencies of manual tracking. The transition to Sectigo's platform has streamlined their certificate management process, resulting in faster response times and greater accuracy.

### Key Results

- ✓ **Time savings**  
Automating certificate management has significantly reduced the hours previously spent manually tracking expiration dates.
- ✓ **Reduced risk**  
By eliminating manual processes, Roquette minimized the risk of certificate-related security lapses.
- ✓ **Scalability**  
Sectigo's solution provides the scalability Roquette needs as their infrastructure grows, allowing them to manage a growing number of certificates with ease.

### Conclusion

Sectigo's CLM solution provided Roquette with a secure, efficient, and scalable method to manage its digital certificates. The shift from manual processes to automation not only saved time but also reinforced the company's commitment to security and operational efficiency.

For Roquette, Sectigo proved to be the ideal partner in their digital transformation journey, ensuring that certificate management is both robust and future-proof.

### About Sectigo

Sectigo is a leader in certificate lifecycle management (CLM), providing innovative and comprehensive solutions to secure both human and machine identities for some of the world's most prominent brands. Its cloud-native, automated, and universal CLM platform simplifies and enhances enterprise security by issuing and managing digital certificates from all trusted certificate authorities (CAs). With over two decades of experience, Sectigo stands as one of the largest and most established CAs, serving more than 700,000 customers worldwide.

**By delivering unparalleled digital trust, Sectigo continues to empower organizations to implement robust security protocols with efficiency and confidence.**
