

SCM Pro Trial Guide

See firsthand how automation can reduce manual certificate management efforts while improving visibility and control.

Welcome to your SCM Pro trial

Thank you for starting your SCM Pro trial. SCM Pro helps teams discover SSL/TLS certificates across their environment, identify unknown certificates that create operational risk, and automate certificate issuance and renewals using industry-standard ACME workflows.

Who is this trial for?

SCM Pro is ideal for organizations that:

- Manage multiple public SSL/TLS certificates.
- Rely on spreadsheets, reminders, or manual processes for renewals.
- Need greater visibility into certificates deployed across websites and servers.
- Want to eliminate surprise expirations and avoid certificate-related outages.
- Are preparing for increasing certificate volumes and shorter certificate lifespans.

Your trial goals

We recommend focusing on three outcomes during your evaluation:

Goal 1: Discover certificates across your environment

Run a discovery scan to identify public SSL/TLS certificates associated with your domains, including certificates you may not currently track.

Goal 2: Experience a centralized certificate inventory

Review discovered certificates in one place to understand your certificate footprint, identify visibility gaps, and reduce reliance on spreadsheets or manual tracking.

Goal 3: Set up ACME automation

Configure an ACME-based workflow to automate certificate issuance and renewals, reducing manual effort and helping prevent missed expirations.

Common use cases

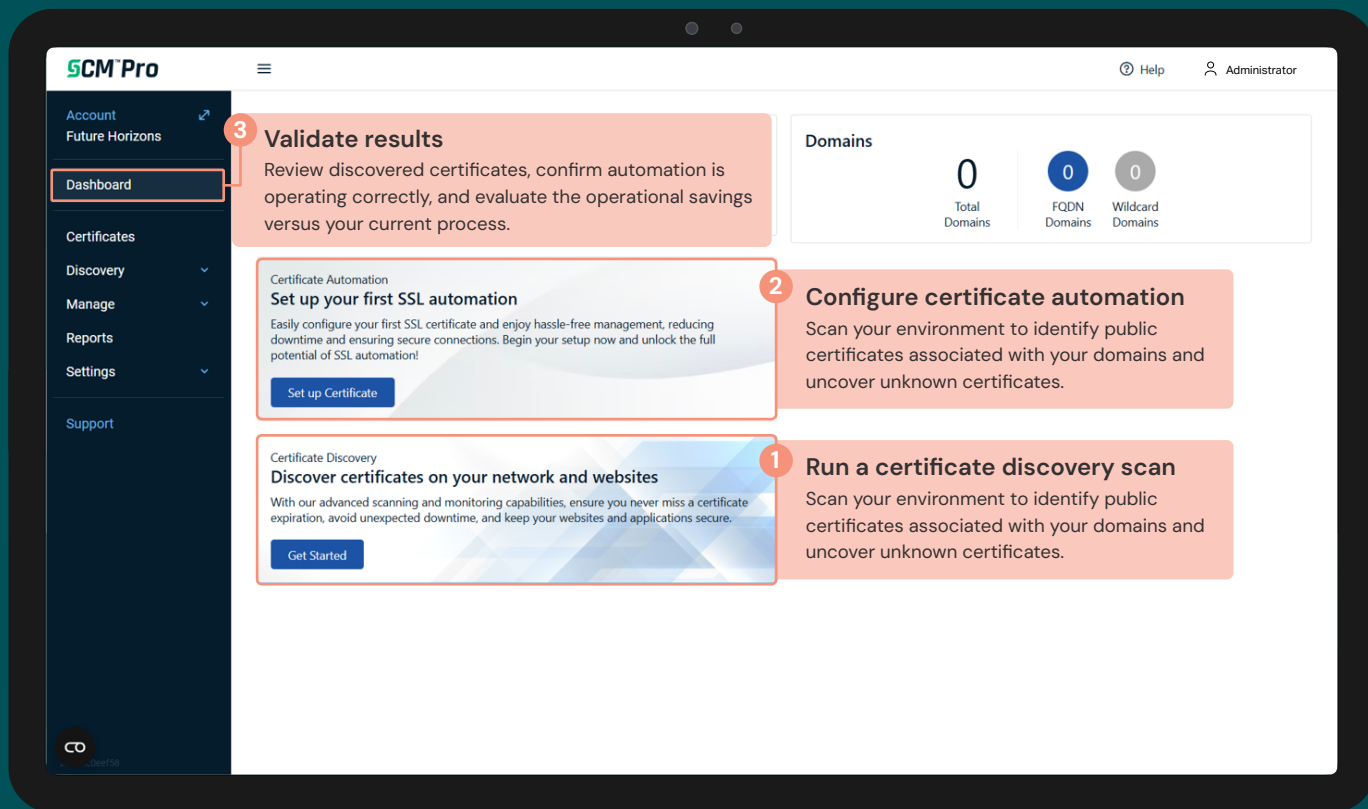

Certificate discovery

- Find known and previously unknown certificates associated with your domains.
- Build a centralized inventory of certificates across your environment.
- Prevent outages caused by unmanaged certificates.

Certificate automation

- Automate certificate issuance and renewals using ACME.
- Reduce manual administration.
- Ensure ongoing TLS coverage without repetitive renewal tasks.

Get started in 3 steps

Frequently asked questions

How long does setup take?

Automating a certificate can be completed in the same time as installing a certificate manually with the added benefit of never having to do it again.

Will I need to replace my existing infrastructure?

No. SCM Pro works with common web server environments and standard ACME clients. The onboarding materials include support for IIS, Apache, and Nginx-based deployments.

What should I try during the trial?

We recommend completing at least one discovery scan and automating at least one certificate workflow to experience both visibility and automation benefits. This aligns directly with the primary use cases demonstrated in the trial assets.
