sectigo

DATASHEET

Sectigo CA Connector for GlobalSign

Keep GlobalSign. Run public and private certificates in one platform.

Most enterprises buy from more than one public CA. The Sectigo CA Connector for GlobalSign brings those certificates into Sectigo Certificate Manager (SCM), so your team can find, issue, renew, and revoke them in the same workflows as everything else.

The challenge

More CAs shouldn't mean more consoles.

Redundancy, regional needs, and acquisitions all add public CAs. Each one brings its own portal, renewal process, and blind spots. As public TLS validity drops toward 47 days by 2029, fragmented workflows create more manual work and make urgent CA changes harder to manage. Consolidating the lifecycle is easier than consolidating every CA relationship.

What you can get done

Consolidate Certificate Lifecycle Management (CLM), not your public CAs

One CLM across public CAs

Bring GlobalSign, Sectigo, and other public certificates into one inventory with clear

Automate for shorter lifespans

Replace CA-specific renewal processes with consistent workflows built for growing certificate volumes.

Stay flexible across CAs

Keep existing CA relationships while maintaining the option to shift selected issuance when needs change.

Use cases

Built for the way PKI teams work

Build public CA redundancy

Add a second issuance path to reduce dependency on a single public CA.

CLM for shorter lifespans

Bring multiple CAs under one inventory and automation model built for shorter certificate lifespans.

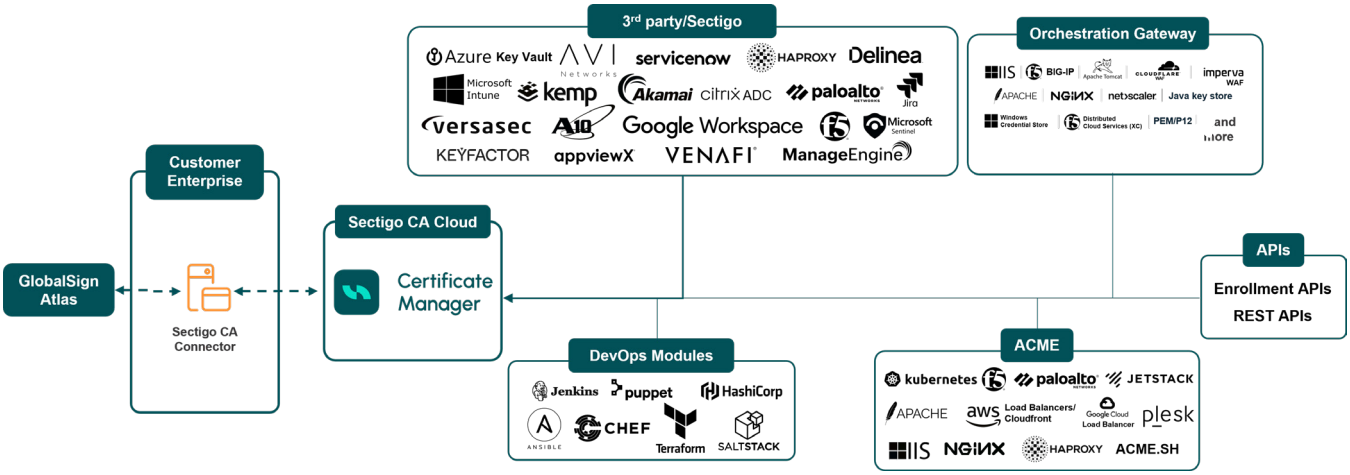

Move between public CAs

Shift selected issuance at your own pace while maintaining visibility across both environments.

Respond to a CA change event

Shift issuance to another public CA without disrupting operations.

How it works

Explore all supported [Sectigo Certificate Manager integrations.]

Technical details at a glance

Supported CA	GlobalSign
Certificate types	DV,OV, and EV TLS/SSL certificates
Lifecycle actions	Discover, deploy, renew, revoke, replace, import
Automation	Sectigo Orchestration Gateway, ACME, REST API
Technical documents	Access here

Why Sectigo Certificate Manager (SCM)

One platform for every certificate you trust

- **CA agnostic by design**
  Manage certificates from GlobalSign, Sectigo, other public CAs, and private CAs in one platform.
- **Built for shorter lifespans**
  Automate renewals and lifecycle workflows as certificate validity periods continue to shrink.
- **Simplicity at scale**
  Standardize inventory, policies, and automation across every CA without changing how teams work.

CA redundancy with Sectigo

A second private CA, ready when you need it.

Keep GlobalSign in SCM while adding Sectigo as a second public CA. Manage both through a single inventory, policy framework, and automation workflow in SCM.

Minimize downtime
Maintain an alternative issuance path and reduce dependency on a single CA environment.

Simplify CA operations
Add Sectigo Private CA and manage both CAs through SCM, with consistent policies and automation.

Stay flexible and in control
Run EJBCA and Sectigo Private CA side by side and shift workloads at your own pace.

About Sectigo

Sectigo is a leading provider of Certificate Lifecycle Management (CLM), helping organizations secure human and machine identities while reducing the hidden risks of modern digital trust. As certificate volumes grow and lifespans shrink, unmanaged certificates are becoming a source of outages, compliance exposure, and operational disruption. Sectigo uses Orchestrated Automation to deliver Simplicity at Scale through its cloud native CLM platform, bringing visibility, control, and lifecycle management together across complex environments. With more than 700,000 customers, including 65% of the Fortune 500, Sectigo is one of the largest and longest standing certificate authorities, with over 20 years of delivering unparalleled digital trust.
