Consolidation Case

Finance & Banking

Sectigo supports a leading finance institution with full automation and consolidating of their certificate operations, increasing security, while reducing manual effort.

Sectigo products

- Active Directory joined certificates for Windows server, Windows desktop campus, Windows desktop branch, Windows ATM and Linux
- Kubernetes container certificates
- Provision and management of a large amount of public SSL certificates
- Azure and Intune integrations
- Management of Google certificates
- Reporting and notification capabilities

Challenges

This leading finance institution, who serves both individuals and businesses, was looking to simplify the process of their certificate lifecycle management, to increase the level of security and reduce the costs and time involved managing their certificates.

Solution

Sectigo helped this global financial institution to fully automate the lifecycle of their digital certificates with Sectigo Certificate Manager, consolidating all certificate-related operations under one platform.

The need for a simplified certificate lifecycle management solution

This bank has an extensive network of branches, own ATMs and partnership ATMs with millions of customers. Safe and secure data and communications have always been paramount within the banking industry, however this bank found they had a growing need for one provider for public and private certificates and felt that efficiency and flexibility had become more essential. For a banking institution of this size, it becomes crucial to align and automate processes. Prior to choosing Sectigo, this bank found that generating private keys, ordering and installing certificates, and then monitoring them was proving too labor intensive. In addition, it increased the risk of expired certificates. Streamlining and consolidating vendors and automating their certificate lifecycle management became a priority.

Why vendor consolidation mattered

- One provider for issuance, automation and management of different public and private certificates
- Support of Windows, MacOs, and Linux environments
- Mobile device management
- Management of Sectigo certificates as well as c ertificates from other public and private CAs
- Integrations with Kubernetes, Azure AD, Intune and GCP

Benefits of Sectigo Certificate Manager

- Flexible and reliable system for digital certificate issuance and lifecycle management
- Automates and centralizes the management of cryptographic keys
- Configurable email alerts to receive notifications about certificate requests and upcoming expiration notices
- Auto Discovery feature imports all existing and future SSL certificates (even for different vendors) on company websites and internal networks
- Ensures no unexpected certificate expiration via a detailed notification process
- Streamlines lifecycle administration with rapid enrollment, approval, issuance, revocation and renewal of all SSL certificates from any CA
- Expert technical assistance
- Cloud-based solutions for ease of use and management
- Real time status checking
- Same day expiration reissuance
- 50+ integrations with leading technology providers

About Sectigo

Sectigo is a leader in certificate lifecycle management (CLM), providing innovative and comprehensive solutions to secure both human and machine identities for some of the world's most prominent brands. Its cloud-native, automated, and universal CLM platform simplifies and enhances enterprise security by issuing and managing digital certificates from all trusted certificate authorities (CAs). With over two decades of experience, Sectigo stands as one of the largest and most established CAs, serving more than 700,000 customers worldwide.

By delivering unparalleled digital trust, Sectigo continues to empower organizations to implement robust securityprotocols with efficiency and confidence.
